

Recent Advances in Emergency Animal Diseases Annual Symposium

16 – 17 October 2019

In association with

Australian Government
Department of Agriculture

Course overview

The recognition, diagnosis and management of an Emergency Animal Disease (EAD) lies at the heart of protecting the health of Australia's primary industries and its people. It is an area facing new challenges and opportunities including the emergence of new diseases, evolving surveillance responsibilities and the development of new diagnostic technologies.

This symposium gathers veterinary practitioners, animal health managers, diagnosticians and livestock industry representatives to learn and discuss recent innovations and challenges in EAD surveillance, diagnostics and management. It will also provide some refresher training in EAD preparedness for private and government veterinary practitioners.

Course Detail

The symposium will involve presentations by staff from AAHL, the Department of Agriculture, Biosecurity Queensland, NSW DPI, New Zealand MPI and the University of Melbourne. It will be hosted by AAHL, one of the world's most sophisticated high-containment laboratories. This popular EAD Symposium, now in its sixth year, will take place on 16-17 October 2019, with a focus on emerging diseases of interest and outbreak investigation.

DURATION: 1.5 Days	CREDIT: This event is eligible for 9 AVA VetEd points
REQUIREMENTS: Photo ID required	COST: Free

Ideal participants

This course is designed for veterinarians, animal health managers, diagnosticians and livestock industry representatives.
